

Chemistry 1A
Professor Pines

Midterm Exam 1
(Closed Book, 75 minutes, 50 points)

September 20, 1995
Page 1 of 6

Name: _____

Discussion TA: _____

SID: _____

Lab Section: _____

Identification Sticker

Possibly Useful Information:

Absolute T(K) = T(°C) + 273.15

1.000 atm = 760.0 torr

STP is 273.15 K, 1.00 atm

$R = 0.08206 \text{ L atm mol}^{-1} \text{ K}^{-1}$

$u_{rms} = \sqrt{u^2} = \sqrt{\frac{3RT}{M}}$

$E_{kinetic} = \frac{nN_0 m \overline{u^2}}{2} = \frac{3}{2} nRT$

tetrahedral angle (e.g. H-C-H in CH₄) = 109.5°

$N_0 = 6.0221 \times 10^{23} \text{ mol}^{-1}$

Ideal Gas: $PV = nRT$

$V_m = 22.414 \text{ L} \cdot \text{mol}^{-1}$ (for an ideal gas)

$P = \frac{Nm\overline{u^2}}{3V}$

$\overline{E_k} = \frac{1}{2} m\overline{u^2} = \frac{E_k}{N_0}$

Test-taking strategy: PLEASE READ THIS FIRST

Write your name on all 6 pages. This test consists of three parts: multiple choice, short answers, and problems requiring a longer answer. In order to maximize your score on the exam:

- Do the questions you know how to do first.
- Then, go back and spend more time on the questions you find more challenging.
- Budget your time carefully---don't spend too much time on one problem.
Anticipate spending about 20 minutes on each section.
- Don't forget to include units!

NAME _____

Part I: Multiple Choice, 2 points each, 20 points total
CIRCLE THE CORRECT ANSWER OR ANSWERS FOR EACH QUESTION

1.) In the combustion of butane (C₄H₁₀) in excess O₂ to give CO₂ and H₂O, how many moles of CO₂ are formed from each mole of butane?

- 1 2 3 4 5

2.) The total kinetic energy of 1.0 mole of argon (Ar) gas at 420 K is 5.2 kJ. What is the total kinetic energy of 1.0 mole of helium (He) gas at the same temperature?

- 5.2 kJ 1.6 kJ 1.0 kJ 0.52 kJ 0.16 kJ

3.) The reaction of zinc metal (Zn) with hydrochloric acid (HCl) produces hydrogen gas (H₂), according to the equation below. In order to fill a 89.6 liter airbag at STP with hydrogen, how many moles of Zn are required?

- 1 2 3 4 5

4.) At a fixed temperature in a container of a gas, which of the following is true:

- a) All molecules have the same kinetic energy
- b) Different molecules of the same gas have a range of kinetic energies
- c) Large molecules and small molecules move at the same speed
- d) The speed of a particular gas molecule is constant
- e) None of the above.

5.) Curves A and B in the figure below describe the speed distributions of oxygen molecules. Distribution A corresponds to a temperature of 50K. To what temperature does the distribution B correspond?

Molecular Speed Distribution

- 25 K 50 K 141 K 200 K 400 K

NAME _____

6.) If 1 mole of glucose ($C_6H_{12}O_6$) reacts with 1 mole of O_2 , according to the reaction below,

which is the limiting reagent in the reaction?

 $C_6H_{12}O_6$ O_2 CO_2 H_2O

7.) The pressure at sea level is 1.0 atm and for every 10 meters of depth beneath the sea, the pressure increases by 1.0 atm. In which of the following situations would the volume of a balloon decrease from 2.0 liters to 1.0 liter?

- going from a depth of 60 meters to 30 meters below sea level
- going from a depth of 50 meters to 20 meters below sea level
- going from a depth of 0 meters to 20 meters below sea level
- going from a depth of 20 meters to 50 meters below sea level
- going from a depth of 30 meters to 60 meters below sea level

8.) Circle all of the species which have been drawn with correct Lewis dot structures:

9.) An atom of krypton (Kr) will most strongly attract which of the following atoms:

Xe Kr Ar Ne He

10.) Given the intermolecular potentials below, at what distance R (in \AA) will an electron jump between a sodium and chlorine atom as the atoms approach each other from $R = \infty$?

NAME _____

Part III: Problems, 15 points total**SHOW ALL OF YOUR WORK AND USE UNITS IN YOUR CALCULATIONS****(7 pts.)**

1.) The compounds CO_2 and H_2O have vaporization temperatures (the temperature of boiling or sublimation) of -78°C and 100°C respectively.

a.) Draw the Lewis dot structures of the two molecules:

b.) Which of these molecules has the lower overall dipole moment (is the least polar)? Use molecular structures to justify your answer.

c.) Explain why there is a significant difference in the vaporization temperatures of these two compounds.

NAME _____

(9 pts.)

1.) Lithium carbonate (Li_2CO_3) and rubidium carbonate (Rb_2CO_3) are both white solids which react with acid (H_3O^+) in the following manner:

Suppose you have the following equipment and supplies available:

- a balance to weigh amounts of the solid carbonate samples
- a device to measure the volume of CO_2 gas produced in the reaction (in L)
- an unlimited amount of a solution of H_3O^+
- several grams of each carbonate compound

a.) Balance the above equations.

b.) Given unidentified samples of these two carbonates and the above equipment, write a procedure to determine which sample is which. Show your reasoning below. Write your procedure in the box.

Final Procedure
