If you are making up an I-grade, indicate the semester you took 3A \_\_\_\_\_ and the Professor \_\_\_\_\_.

This exam has 9 pages; **make sure that you have them all**. We will only grade answers that are in the designated spaces. Please do your scratch work on the backs of the exam pages. Write only **one** answer to each problem; multiple answers will receive **no** credit, even if one of them is correct.

**Note:** This examination runs for a total of 80 minutes. No questions will be answered by proctors after the exam begins. Please write legibly; ambiguous or messy answers will receive **no credit**.

Do Not Write in this Box.

1. \_\_\_\_\_ (12)

2. \_\_\_\_\_ (10)

3. \_\_\_\_\_ (14)

4. \_\_\_\_\_ (10)

5. \_\_\_\_\_ (12)

6. \_\_\_\_\_ (15)

7. \_\_\_\_\_ (12)

8. \_\_\_\_\_ (15)

Total \_\_\_\_\_ (100)

Chem. 3A

Midterm Exam #2

Page 2 of 9

**1. (12 points)**

- (a) Draw a Fisher projection of  
(2S,3R)-2-chloro-3methylhexane

- (b) Name the following compound:  
(Use IUPAC nomenclature and do not forget stereochemistry)

Answer:

- (c) An old bottle of 2-iodobutane has a label marked "2-iodobutane mixture of enantiomers". The optical rotation  $\alpha$  of a solution of 0.08g of this mixture in 2 mL of solvent measured in a 5 cm tube is found to be  $+0.192^\circ$ . Given that the specific rotation of pure (R)-2-iodobutane is  $[\alpha]_D = -16^\circ$ , What is the optical purity of the sample? Calculate the percentages of (S) and (R) enantiomers in the old bottle. Show the equation used for the calculation of  $[\alpha]_D$  as well as the details of your calculation.

Answers: Optical Purity =

% (S) =

% (R) =

Midterm Exam #2

Page 3 of 9

## 2. (10 points)

- (a) Circle any molecule below that has an (R) configuration according to the Cahn-Ingold-Prelog convention

- (b) What is the observed reaction rate for the  $\text{S}_{\text{N}}2$  reaction below given the following concentrations:  
 $[\text{CH}_3\text{Cl}] = 0.5 \text{ mol L}^{-1}$ ;  $[\text{OH}^-] = 0.03 \text{ mol L}^{-1}$  and the rate constant  $k = 0.003 \text{ mol}^{-1} \text{ L s}^{-1}$ .  
 Your answer should show an equation for the rate law as well as all calculations.

ANSWER

Rate =

- (c) Circle any compound below that is optically active

4/1998 Chem. 3A

Midterm Exam #2

Page 4 of 9

3. (14 points) (a) **Explain** why treatment of (S)-2-iodooctane with NaI causes the optical activity of the starting material to disappear. Your answer must **name** and describe in one sentence the type of reaction mechanism involved and its **stereochemical consequences** and show a complete equation with **all materials** (starting and final) and their **stereochemistry**. (2-iodooctane is  $\text{CH}_3\text{CHI}(\text{CH}_2)_5\text{CH}_3$ )

(b) Propose a **step-by step** synthesis of  $\text{CH}_3\text{CH}=\text{CHCH}_3$  from **ethanol** as the only source of C atoms. Show **all reagents** required for each step but no mechanisms or curved arrows are needed.

Chem. 3A

Midterm Exam #2

Page 5 of 9

## 4. ( 10 points)

(a) Show the most favorable conformation (as a SAWHORSE projection) of the starting material for the E2 elimination below

(b) Show a clear stereochemical representation of the alkene produced in this reaction.

(c) Write clear structures for the products containing no oxygen atom that are formed when 2-bromo-2-methylbutane is allowed to react with excess warm potassium t-butoxide.

Chem. 3A

Midterm Exam #2

Page 6 of 9

## 5. (12 points)

- (a) How many stereoisomers are possible in principle for the compound shown below (circle one number)

- |    |    |    |    |
|----|----|----|----|
| 2  | 4  | 6  | 8  |
| 3  | 9  | 16 | 27 |
| 18 | 20 | 24 | 32 |
| 36 | 48 | 64 | 81 |

- (b) Rank the following nucleophiles in order of reactivity for an  $S_N2$  reaction

ANSWER: \_\_\_\_\_ > \_\_\_\_\_ > \_\_\_\_\_ > \_\_\_\_\_  
*Most reactive*  *Least reactive*

- (c) Explain why the free-radical monobromination of \_\_\_\_\_ affords a racemic mixture. Show the structure of both products and the intermediate leading to them

Structure of intermediate

Structure of products

**Brief Explanation:** a racemic mixture is obtained because...

Midterm Exam #2

Page 7 of 9

6. (15 points) (a) Show clear structures for **all** of the products normally expected in the reaction below. Assume that no rearrangement occurs and do not show any mechanism.

- (b) What is the order of the reaction?

ANSWER:

- (c) Show a complete **step-by-step** mechanism (show **all** curved arrows!) for the reaction below

Chem. 3A

Midterm Exam #2

Page 8 of 9

7. (12 points) (a) Which of the two synthetic routes, A or B, shown below would be best to obtain a high yield of the desired product? Explain your answer **discussing** briefly the type of mechanism involved and **comparing** the species in each reaction. Also **show a clear structure** for the side-product that might be obtained by the less desirable route.

**Answer:***Best route to product***Answer:***Structure of side-product for less desirable route*

(b) Complete the reactions below showing a clear **structure** for each of the missing reagent(s).

Chem. 3A

Midterm Exam #2

Page 9 of 9

8. ( 15 points) Show the structure of the **major product(s)** obtained in each of the following reactions. Your answer must show clear **stereochemistry** where applicable, write **NR** if no reaction occurs. Do not show any mechanisms!
