Other/none, explain: \_\_\_\_\_

## Instructions:

- One double-sided sheet of notes, no books, no calculators.
- Exam time 50 minutes, do all of the problems.
- You must justify your answers for full credit.
- Write your answers in the space below each problem.
- If you need more space, use reverse side or scratch pages.  
Indicate clearly where to find your answers.

1. (5 points) Find the interval of convergence, including determination of the convergence at the end points, for the power series below.

$$\sum_{n=1}^{\infty} (-1)^n \frac{x^n}{n \cdot 3^{2n}}$$

2. (5 points) Show that the series

$$y = \sum_{n=0}^{\infty} \frac{x^{2n+1}}{1 \cdot 3 \cdot 5 \cdots (2n+1)}$$

is a solution of the differential equation

$$y' = 1 + xy.$$

3. Determine if the series below are absolutely convergent (AC), conditionally convergent (CC), or divergent (D).

a) (5 points)  $\sum_{n=0}^{\infty} \left( \frac{2 - 3 \sin n}{6} \right)^n$

b) (5 points)  $\sum_{n=1}^{\infty} (-1)^n [\sin(1/n^2)]^{1/3}$

4. Find the sum of the series below.

a) (5 points)  $\sum_{n=1}^{\infty} \frac{2}{n(n+2)}$

b) (5 points)  $\sum_{n=0}^{\infty} \left( \frac{1}{1+3 \cdot (-1)^n} \right)^n$

5. (5 points) Find all  $x$  that satisfy the equation

$$\sum_{n=0}^{\infty} (-1)^n (n+1) x^{2n+2} = \frac{2}{9}.$$
