

CE C30/ME C85 Introduction to Solid Mechanics
Section 2, Course Information

Lect.	Date	Topic	Reading*	Homework*
1	1/22	Introduction	1.1-6	
2	1/24	Review of vector algebra	2.1-2, 2.4, 3.1C-F, 3.2A-B	2.4, 2.8
3	1/27	Forces and moments (1)	2.1-5	2.32, 2.74
4	1/29	Forces and moments (2)	3.1-2	3.5, 3.19
5	1/31	Equivalent force/moment systems	3.3-4	3.66, 3.70
6	2/3	Equilibrium (1)	4.1-3	4.5, 4.38
7	2/5	Equilibrium (2). Friction	4.1-3, 4.4	4.61, 4.86
8	2/7	2D trusses (method of joints)	6.1	6.6, 6.7
9	2/10	2D trusses (method of sections)	6.2	6.26, 6.42
10	2/12	Frames and machines	6.3-4	6.56, 6.65
11	2/14	Centroids. Distributed loading	5.1-4	5.51, 5.55
12	2/19	Internal forces and moments	3.1A, 12.1	12.3, 12.7
13	2/21	Shear and bending moment diagrams	12.2	12.8, 12.45
14	2/24	Stresses (1)	8.1-4	8.1, 8.5
15	2/26	Stresses (2)	8.1-4	8.33, 8.45
16	2/28	Deformation and strain	9.1A	9.3, 9.7
17	3/2	Intro to strain-stress relations	9.1B-D	9.13, 9.14
18	3/4	Deflection of bars	9.1F	9.23, 9.77
19	3/6	Static indeterminacy	9.2	9.32, 9.34
20	3/9	Torsion of circular shafts (1)	10.1	10.6, 10.16 (due 4/3)
21	3/11	Torsion of circular shafts (2)	10.2-3	10.31, 10.45 (due 4/3)
22	3/13	Torsion of thin-walled shafts	Class notes	Assigned in class (due 4/3)
23	3/16	Review for Midterm Exam		
24	3/18	Midterm Exam (through Lect #19)		
25	3/20	Bending of beams (1)	11.1-2, 7.1-2	11.3, 11.11 (due 4/10)
26	3/30	Bending of beams (2)	11.1-2, 7.1-2	11.17, 11.19 (due 4/10)
27	4/1	Bending with axial loads	11.4, 11.6	11.51, 11.85 (due 4/10)
28	4/3	Shear stresses in beams (1)	13.1-3	13.7, 13.9 (due 4/17)
29	4/6	Shear stresses in beams (2)	13.1-3	13.25, 13.26 (due 4/17)
30	4/8	Deflection of beams	15.1-2	15.12, 15.20 (due 4/17)
31	4/10	Singularity functions	Class notes	Assigned in class (due 4/17)

* From "Statics and Mechanics of Materials", by F.P. Beer, E.R. Johnston et al, 2nd edition.

Lect.	Date	Topic	Reading*	Homework*
32	4/13	Buckling of columns (1)	16.1	16.1, 16.3
33	4/15	Buckling of columns (2)	16.1	16.55, 16.56
34	4/17	Stress transformation	14.1A	14.2, 14.17
35	4/20	Principal stresses and max in-plane shear	14.1B	14.6, 14.11
36	4/22	2D Mohr circles	14.2	14.30, 14.42
37	4/24	3D Mohr circles. Strain transformation	Class notes	Assigned in class
38	4/27	Generalized Hooke's law	9.4-7	9.58, 9.81 (due 5/4)
39	4/29	Yield and fracture criteria	Class notes	Assigned in class (due 5/4)
40	5/1	Other applications, extensions	Class notes	
41	5/4	Review		

Time and location: MWF 1–2pm, 277 Cory Hall.

Instructor:

Francisco Armero

Office hours: 713 Davis Hall, time to be announced.

Phone: (510) 643-0813 e-mail address: armero@berkeley.edu

Course webpage: <http://faculty.ce.berkeley.edu/armero/Courses/CE30>

GSI: Time and location of office hours to be announced.

Required textbook: (On reserve in the Engineering library for 2 hour loan)

F.P. Beer, E.R. Johnston et al, “*Statics and Mechanics of Materials*”, 2nd edition, McGraw Hill.

Homework:

The syllabus above includes the reading and homework assignments of the course. The problems assigned in one week (that is, on Monday, Wednesday and Friday classes) are due the following Friday, at the beginning of the class. No late homework will be accepted. The solutions will be available at the course website by the following week. Please note the special arrangements for Lectures #20 to #22 before the midterm (with 6 problems due Friday 4/3), Lectures #25 to #27 (with 6 problems due Friday 4/10), Lectures #28 to #31 (with 8 problems due Friday 4/17), and for the last week of the course (Lectures #38 and #39). Additional voluntary projects using the software package MATLAB will be assigned during the course.

Grading system:

Homework 25%, midterm 25%, final 50%. (Closed-book midterm and final)
